

## **Searching for which cases an attorney is linked to**

Are you trying to find out which cases an attorney is currently linked to? This can be accomplished through the ECF Queries feature. Click on the Queries menu option. Click inside the first or last name field. Type the attorney's first or last name. To assist in keeping the matches to a minimum, select "attorney" from the "type" drop-down menu. Type the attorney's last name in the last name field AND type the attorney's first name in the first name field. Click on the Run Query button at the bottom. If there are multiple matches in ECF a window will appear with various name options. Click on the name of the attorney that matches your attorney name. A list of active cases appears. If a list doesn't appear and instead you are brought to the query screen for an individual case, this indicates there is only one case the attorney is currently active on in the District Court of Minnesota. That case appears in the query window. Please remember that running this query does require a PACER logon and password as all queries do.
